

Alto S-band Smart Amplifier Module

with low noise, high linearity and variable gain

Typical applications:

- Teleports & Earth Stations
- Satellite Operations
- Government & Defence applications
- Telemetry, Tracking & Command
- High Resilience applications

The S-band smart low noise amplifier module is designed to work in the Genus 1U chassis series, operating over 850-3150 MHz. The module has low noise, high linearity, +42 to 0dB gain range with variable gain. The chassis has the capacity 16 amplifier modules.

Amplifier Module

Amplifier Module

Compact form factor allowing multiple modules to be housed in the Genus chassis. Each module occupies 1 slot in the chassis.

Hot Swap & replaceable RF
Amplifier module

Variable Gain For balancing input signals.

S-Band 850-3150 MHz operating frequency range

Low Noise
For prime signal quality

High Linearity
Ensures overall RF gain signal performance is optimised

Chassis Options

Local control & monitoring via HMI high resolution touchscreen

Flexible Module Configurations choose from a mixture of amplifier modules with different operating frequencies.

Resilience from dual redundant hot-swap power supplies & field replaceable CPU & HMI

Remote control & monitoring via RJ45 Ethernet port with SNMP & web browser interface

Compact indoor & outdoor chassis options, which can be part populated

Field replaceable Internal 10MHz reference source and external reference inject port with auto detection (optional)

Secure protocols with SNMPv3 and HTTPS

Indoor Chassis

Outdoor Unit

Smart Amplifier Module - RF Parameters		
Model Numbers	ALT-G1S-S6-112	
Frequency Range	850-3150 MHz	
RF Connectors	50Ω SMA	
Gain (dB)	Max.	42±2
	Min.	0±2
Gain Flatness (dB)	850 to 3150 MHz	±2.0
	Any 36MHz	±0.2
Gain Steps (dB)	0.25±0.15	
Input Return Loss	16 dB typ. 14 dB min	
Output Return Loss	16 dB typ. 12 dB min	
Isolation (dB)	Typ.	60. With amplifiers set at the same gain level. Worst case isolation is between adjacent amps, isolation degrades dB-to-dB for different gain levels.
	Min.	50 With amplifiers set at the same gain level. Worst case isolation is between adjacent amps, isolation degrades dB-to-dB for different gain levels.
Reverse Gain (dB)	< -60 Typical	
Noise Figure (dB)	Typ.	2.5 At max gain setting
	Min.	3.0 At max gain setting
1dB GCP (dBm)	Typ.	23 At max gain setting
	Min.	20 At max gain setting
OIP3 (dBm)	Typ.	35 At max gain setting
	Min.	32 At max gain setting
OIP2 (dBm)	Typ.	45
	Min.	41
In band, signal independent spuri	<-85dBm max. Very low level spuria from CPU clock, switch mode PSU and other control electronics inside the chassis	
MTBF	>150,000 hrs. MTBF of each amp module. These are hot-swap	
Maximum Input Level	+20dBm. For no damage. None operational.	
Module Weight	0.35kg	
Spec Version	0.2	

Note 1: The specification is subject to regular reviews and will be updated from time to time as part of our continuing product development and improved spec accuracy.

Note 2: Operation beyond the quoted limits stated above may cause instantaneous and permanent damage.

Note 3: All specs are for 50 Ohm connectors unless detailed otherwise.
