## StingRay RF over Fibre

 DWDM (Dense Wavelength Division Multiplexing), 40 wavelengths, up to 500 km distance, 200 series extended L-band module \& 13/18V LNB powering (on TX module)
## Typical applications:

- Ku-band and Ka-band ready for HTS applications
- Long distance distribution of comms traffic across site with minimal loss - up to 500 km distances
- General satcoms- teleports, video head-ends, TVRO
- Compact solution for small quantity links such as tactical HQ

The StingRay DWDM 200 Series of L-band RF over fibre units are designed to provide compact fibre links, with forty wavelengths on a single fibre cable, and transmission distance of up to 500 km with optical amplifiers. The transmit modules benefit from a high and wide dynamic range with automatic link optimisation ensuring high quality Lband transmission.

The StingRay DWDM system comprises of transmit modules and a multiplexer module to combine up to 40 wavelengths on to a single fibre cable at the transmit end. A demultiplexer module and receive modules are then used at the receive end to split the separate wavelengths.

For more wavelengths and longer distances, please contact us.
Fibre Modules

850-2450 MHz
operating frequency range

Up to 40 wavelengths on a single fibre cable

Up to 500 km transmission ' distance with transmit, receive and $\bigcirc$ optical amplifier module options

## Chassis Options

LNB Powering $13 / 18 \mathrm{~V}$ on
TX modules only

High isolation between
modules for signal quality

Compact indoor \& outdoor chassis options, which can be part populated

Remote control \& monitoring via RJ45 Ethernet port with TCPIIP, SNMP \& web browser interface

Local control \& monitoring via front panel push buttons \& display

Resilience from dual redundant hot-swap power supplies, hot-swap fibre modules \& fans

10 MHz Inject from an external source chassis option

Outdoor Unit (ODU)

| RF Parameters (TX \& RX Modules) |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
